

FUNGICIDAL WASH

A non-toxic, non-irritant anti-fungicidal wash miscible with water, with detergent properties designed to combat the main biological problems on exterior surface of algae, lichen and moss.

APPLICATIONS

- As a general fungicide before repainting.
- Treatment of plaster, concrete or brickwork to prevent the spread of dry rot fungus.
- Treatment of plaster to combat fungal growth whilst drying out.
- General cleaning and sterilising solution for use in dairies and breweries etc.

ADVANTAGES

- Effective against a wide range of micro-organisms.
- No effect of drying, adhesion or durability of subsequently applied coatings.
- Non-toxic and non-irritant.
- Simple to use.

TECHNICAL DATA

Water Miscible Liquid : S.G. – 0.98 : ph - 7.8 : Flashpoint - 57 Deg C.

UN17.91 : Corrosive Packaging Group 3 : Emergency Action Code 2x.

APPLICATION

FUNGICIDAL WASH should be diluted upto a ratio of 4 parts water to 1 part FUNGICIDAL WASH.

Surface heavily contaminated with fungal growth should be sprayed or brushed with neat FUNGICIDAL WASH. The moss and lichen etc., will be killed and can be removed from the surface within 72 – 96 hours either by brushing or pressure washing.

Surfaces such as plaster or concrete which are to be treated as a precautionary measure should be washed or sprayed and allowed to dry prior to any further treatment.

All equipment should be thoroughly washed with water.

PACKAGING: FUNGICIDAL WASH is available in 5 litre containers,

STORAGE: Store in sealed containers at moderate temperatures and keep out of reach of children.

HEALTH & SAFETY No toxicity or skin irritation has been noted but as individual skin sensitivity varies. We would recommend the use of gloves and goggles and prolonged skin contact should be avoided.
